

## NU Confidence

Dr. George received a U.S. Patent, #11,179,415, on November 23, 2021. It is for the process of using chlorine dioxide for treating COVID-19 by disabling, treating, or attenuating the SARS COV-2 virus and all its future variants. You will be using it "off label", from its labelled instructions. Nu Confidence (NU C.) is not FDA approved for use on COVID-19 and NO CLAIMS ARE MADE THAT IT DOES!

### Directions for Use:

To ensure long shelf life, NU C. is provided in two separate containers.

- Pour the small, teaspoon sized, vial's contents into the larger Nu C. bottle, tap the vial several times onto and into the NU C. bottle, to ensure emptying all the vial's contents.
- Replace and tighten bottle cap on larger bottle, **DO NOT SHAKE**.
- Wait **30** minutes, then invert the bottle three times to complete activation.
- Place a fourth of the larger bottle's contents into one of the one ounce nozzled dispensing (D.) bottles, REMOVE THE NASAL PLUG IN ORDER TO DO SO, and fill to the bottom of its neck, then replace the nasal plug back into its original position.
- Before use, always turn dispensing bottle over three times to ensure any escaping chlorine dioxide gas incorporates back into the solution.
- Blow your nose gently if it is stuffy or runny.
- Use the lying-head-back position (LHB )- in medical literature. Thus, lie on your back, ease your head over the edge of a bed, point your nose directly to the ceiling. Tilt the D. bottle upside down, with its nozzle just outside of your nostril, about a quarter of an inch. Place 20 drops into a nostril.
- You will feel the drops as you dispense them from the bottle. When done, turn your head sideways, more than 45 degrees. Stay in this position for two minutes. The aim is to get the liquid to go through the nasal cavity and into the sinuses. After two minutes, perform this same action on your other nostril.
- Repeat this procedure three times a day - morning, noon, and night. Store the NU C. bottle in a freezer, and the D. bottle in a refrigerator. CLO<sub>2</sub> boils off slowly at 52 degrees Fahrenheit.
- The D. bottle should last 1 week. So, there is enough for two people to treat themselves for two weeks.
- To thaw the NU C. bottle, place it in a microwave oven, for 10 second intervals, until it thaws out enough to be poured into the D. bottle. Then place the NU C. bottle back into the freezer.
